Reference letter

BG Production deals with the processing of salmon, offering the highest quality products.

BG Production focuses on knowledge, competences and rational management as well as continuous development in the implementation of the best solutions for the company and our business partners.

The highest quality of our products is the foundation of BG Production. It cannot be otherwise, because BG Production is responsible for delivering always healthy, fresh and tasty products to the tables of millions of people around the world.

That is why at BG Production we implement the best techniques of quality management, such as QC- Quality Control.

For reasons of safety for human health, fish processing requires special measures ensuring a hygienic and safe production process.

Each production stage is subject to constant analysis and is constantly monitored. And the guarantee that the fish we supply are healthy and fresh are numerous certificates in this area. For example, IFS FOOD, BRC GLOBAL QUALITY, GLOBAL GAP, MSC/ASC certificates and good practices in the field of HACCP that we use.

We control all processes that take place in our company. We employ the best experts in this field and also cooperate with external companies.

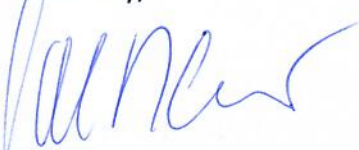

In the area of maintaining the highest standards of production hygiene, we have been cooperating with D-SAN Solutions Ltd. (subsidiary company of ALVAR Ltd.) since December 2021.

As the first company in Europe in the fish processing industry, we purchased the fourth generation D-SAN disinfection system, which provides automatic control of the disinfection process using the fogging technology.

It is positively surprising that the consumption of disinfectants and water is very low. The system is easy to use and provides additional microbiologic safety.

We positively recommend cooperation with D-SAN Solutions Ltd. (subsidiary company of ALVAR Ltd. based in Iceland).

Sincerely,

Szymon Januszewski, DVM
Quality Assurance & Food Safety Director
